Professional Activity/Experience (Summary)

Full-stack developer with 7+ years of experience, including Golang, Python, Javascript, Node.js, HTML, CSS.
Experience as Team leader.
Have a deep and broad experience with HTTP protocol.
Active proponent of Golang.
Python Frameworks: Django, Flask.
Using tools to lead projects: git + trello + github + telegram/slack + wercker.
Knowledge of Database MongoDB, PostgreSQL, MySQL.
Have certificate: 10 gen's MongoDB administrator.

Projects Experience

Period	From 06.2015	To Present time
Position	Team lead, Software engineering	
Responsibilities	<p>Projects:</p> <p>vector.education</p> <p>lmbd.ru</p> <p>Role overview: team lead helps to developers to deliver a valuable result to our clients. Also, make architectural decisions for projects we built. Write critical parts of code, code review.</p> <p>Interesting challenges: to interact in a team and efficient operation.</p> <p>I'm an active proponent of Golang - I like the power of predictable and maintainable web applications, using orthogonal golang code at server side, and the way that client and server side application linted and test-covered parts interact well with each other. My personal development projects include a binding for duktape javascript engine, a starter kit for golang developers to start isomorphic web apps with server render easily. Also I developed several middlewares for RESTful, image uploading/processing middlewares and tools for software development workflow.</p> <p>TECHNICAL SKILLS:</p> <p>I have a deep and broad experience with HTTP protocol due to writing mostly for the web platform. The most general experience I have got when I have built the complicated web applications with large client side logic and communication with servers via RESTful API. I've worked in teams with an aggressive focus on RESTful HTTP API, stateless servers and HTTP-based approaches: cache, HTTP response statuses etc. Also, I have an understanding of best practises to make isomorphic(universal) web applications. The first one I've built was one year before Airbnb's article.</p> <p>Also, I've designed architectures of two large client-side applications. I've provided the starter project for developers with base code structure and practical examples how to solve domain specific tasks. Also, I have experience with real-time browser pushes via socket.io or SockJS in depending on requirements.</p>	

	As I build web applications it often needs to organize infrastructure for the application. I use Docker and Docker centric tools in my workflow to deliver predictable infrastructure.
Environment	Golang \ Postgres \ React \ Django \ Redis \ team leading \ project management

Period	From 05.2013	To Present time
Position	Head of web development/consultant, TC Logiciel	
Responsibilities	Project: zenmall.ru Role overview: web team lead helps to developers to deliver a valuable result to our clients. Also, make architectural. Interesting challenges: building a chat web client. Also, I have written in Node.js real-time messaging server as a mircoservice	
Environment	Node.js \ React \ Backbone \ Redis \ SockJS \ MongoDB	

Period	From 03.2012	To 06.2013
Position	Software engineer, Deltaplan	
Responsibilities	Project: r4.ru Role overview: full stack developer helping project team to release and modify MVP to investigate several hypotheses Interesting challenges: to build isomorphic javascript application without react	
Environment	Node.js \ Backbone \ SockJS \ MongoDB \ Apache ActiveMQ	

Period	From 04.2011	To 04.2012
Position	Web developer	
Responsibilities	Project: addqd.com Role overview: single full stack developer helping with all technical related problems Interesting challenges: to deploy the application into AWS EC2, and manage infrastructure(vm setups and fabric deployment script)	
Environment	Python \ Flask \ Backbone \ AWS \ MongoDB	

Professional Skills

Skills	Experience, in years	Level	Last used, year
Programming Languages			
Python	3	Advanced	2011
Go / Golang	4	Expert	2018
Databases			
MySQL	4	Basic	2012
PostgreSQL	4	Advanced	2018
MongoDB	7	Expert	2018
Front-end			
HTML	10	Expert	2018
CSS	10	Expert	2018
JavaScript	8	Expert	2018
Backbone JS	4	Expert	2015
Node JS	3	Expert	2014
React JS	4	Advanced	2018
Python Frameworks			
Django	4	Advanced	2012
Flask	3	Advanced	2012
Engines, Platforms, IDE			
Sphinx	1	Basic	2012

APIs			
Vkontakte API	1	Advanced	2012
Robokassa API	2	Expert	2014
Facebook API	7	Advanced	2018
Version control			
Mercurial	2	Basic	2010
Git	8	Advanced	2018
Project Tracking			
Jira	1	Basic	2012
Management			
Project Management	4	Advanced	2018
Web-services
